## Pure Acrylic Contact Juggling Ball

Unlike polycarbonate balls, acrylic has no resistance when rubbed against acrylic, making your multi-ball stacks smooth and easy, perfect for isolations, these balls are made using optical grade material which is free of internal distortions, seamless, one piece and highly polished.

Durable, chip resistant and virtually shatter proof.

## WARNING: FIRE DANGER

Clear Acrylic Balls pose a very real fire danger if left in direct sunlight near combustible surfaces, even inside cars and behind windows. They concentrate the sun's rays like a magnifying glass, potentially causing combustions or burns. Darker coloured acrylic Balls are less of a fire danger.
